VBM Laryngeal Tube

The Laryngeal Tube is a supraglottic airway device for the use in general anesthesia during spontaneous or positive pressure ventilation. In emergency it is an ideal adjunct to secure the airway during difficult airway management as an alternative technique to mask ventilation and tracheal intubation.

The Laryngeal Tube is available in a single lumen version (LT + LT-D) as well as in a dual lumen version (LTS II + LTS-D). With the dual lumen version the main advantages of Laryngeal Mask (easy handling) and Combitube (aspiration protection) were combined to develop an instrument to secure the airway. Both versions are available as reusable products as well as disposable products to reduce the risk of cross infections.

Product Features

Both Cuffs
- are high volume cuffs which adjust ideal to the anatomical situation

Product Features

COLOR CODING

- connector and syringe are color coded
- the approximate inflation volumes are indicated on the syringe for each size to allow quick inflation of both cuffs
- in elective use a cuff pressure of 60cmH₂O is recommended (VBM Cuff Pressure Gauge "UNIVERSAL")

BITEBLOCK

- clips into the tube and protects it from occlusion
- allows tube fixation with the elastic necktape

DESIGN

- form and design allow a blind insertion (without laryngoscopy) and position the Laryngeal Tube in the hypopharynx
- ease of insertion allows the Laryngeal Tube to be used by inexperienced personnel

Accessories

Cuff Pressure Gauge "UNIVERSAL"

- in elective cases, to maintain the cuff pressure at 60cmH₂O
