## **International Breakthrough for Salsnes Filter technology.**

### **Significant contract obtained in Mexico**

**Salsnes Filter AS has recently signed a contract for the supply of Salsnes Filter™ patented system for treating waste water to a large treatment plant in Guadalajara , Mexico.**

**The plant will treat up to 15 000 liters of wastewater per second, which is the biggest primary treatment plant in the world done by filtration. The plant will be delivered in October 2011.**

Salsnes Filter has been working to meet the need of effective, compact and less costly primary treatment and stormwater treatment than conventional sedimentation. Salsnes Filter technology is recognized worldwide for being less than 10% of the size of sedimentation and equal or better in solids separation.

The company has for years supplied the technology for smaller wastewater treatment plants around the world, but has been working to introduce the potential of the technology in medium and large plants.

The plant in Guadalajara will serve the wastewater from more than 5 million people. It is one of the world's largest water treatment plants under construction and is funded by central and local Mexican authorities.

The plant is modern and futuristic, which both waste and waste water from treatment plant are used for energy production through biogas and hydropower.

The contract for Salsnes Filter AS involves design, engineering of pre-treatment to the biological treatment step, including the production and delivery of Salsnes Filter-type SFK Module, including related equipment and automation.

Salsnes Filter AS has seen that this market would open up and has over the past few years been preparing for this. Production facilities have been expanded and upgraded, new production methods have been adopted and the whole production is restructured, as well as using subcontractors for manufacturing. Robots are today used for welding for securing quality, capacity and flexibility in manufacturing.

Now the implementation of the project will take place

It feels good to announce this to all who have believed in us for many years. Our distributors and OEM's, our R&D partners, Board of Directors, shareholders and our customers that we look upon as advisor nr. 1 to develop market, product and a good technology .

On behalf of the Salsnes Team
